1. (10 points) We say that  $L$  is a  $B$ -decision list

**(base case)** if either  $L$  is a number  $y \in \mathbb{Z}$ , or

**(recursion step)**  $L$  is equal to  $(f, v, L')$  where  $f : \mathbb{Z} \rightarrow \{0, 1\}$ ,  $v \in \mathbb{Z}$ , and  $L'$  is a  $B$ -decision list.

We can also define the value  $\text{val}(L, x)$  of a  $B$ -decision list  $L$  at  $x \in \mathbb{Z}$ .

**(base case)** If  $L$  is a number  $y$ , then  $\text{val}(L, x) = y$ , and

**(recursion step)** if  $L = (f, v, L')$ , then

$$\text{val}(L, x) = \begin{cases} v & \text{if } f(x) = 1 \\ \text{val}(L', x) & \text{otherwise} \end{cases}.$$

Similarly one may define the length  $\ell(L)$  of a  $B$ -decision list  $L$ .

**(base case)** If  $L$  is a number  $y$ , then  $\ell(L) = 1$ , and

**(recursion step)** if  $L = (f, v, L')$ , then  $\ell(L) = \ell(L') + 1$ .

Assume that  $\text{val}(L, x) = x$  for any  $x \in [1000]$  show that  $\ell(L) \geq 1000$ .

**Solution:** For a  $B$ -decision list  $L$ , we define  $V(L) = \{\text{val}(L, x) : x \in \mathbb{Z}\}$ .

We prove using structural induction that the size of  $V(L)$  is at most  $\ell(L)$ .

Let  $S'$  be the set of  $B$ -decision lists such that the size of  $V(L)$  is at most  $\ell(L)$ .

- Note that if  $L$  is a number  $y$ , then  $\text{val}(L, x) = y$  for all  $x \in \mathbb{Z}$ ; therefore  $L \in S'$ .
- Assume  $L' \in S'$  and  $L = (f, v, L')$ . It is clear that  $V(L) \subseteq V(L') \cup \{v\}$ . Therefore the size of  $V(L)$  is at most  $\ell(L') + 1 = \ell(L)$ .

As a result, by the structural induction theorem,  $S' = S$ . Which means that the size of  $V(L)$  is at most  $\ell(L)$ .

Assume that  $\text{val}(L, x) = x$  for any  $x \in [1000]$ . This implies that  $|V(L)| \geq 1000$ ; hence,  $\ell(L) \geq 1000$  by the previous observation.

2. (10 points) Let  $S$  be the minimal set such that  $3 \in S$  and  $(x + y) \in S$  for any  $x, y \in S$ . (In other words,  $S$  is generated by  $\{f\}$  from  $\{3\}$ , where  $f(x, y) = x + y$ .) Show that  $S = \{3k : k \in \mathbb{N}\}$ .

**Solution:** The statement consists of two parts:  $S \subseteq \{3k : k \in \mathbb{N}\}$  and  $S \supseteq \{3k : k \in \mathbb{N}\}$ .

- Note that  $\{3\} \subseteq \{3k : k \in \mathbb{N}\}$  and  $f(3k, 3\ell) = 3k + 3\ell = 3(k + \ell)$ . Therefore, by the principle of structural induction  $S \subseteq \{3k : k \in \mathbb{N}\}$ .
- We prove using induction by  $k$  that  $3k \in S$  for all  $k \in \mathbb{N}$ . The base case for  $k = 1$  is true since  $3 \in S$ . Let us prove the induction step from  $k$  to  $k + 1$ . Assume that  $3k \in S$ ; then  $f(3k, 3) = 3(k + 1) \in S$  as well. As a result, by the induction principle,  $3k \in S$  for all  $k \in \mathbb{N}$ ; i.e.,  $S \supseteq \{3k : k \in \mathbb{N}\}$ .
