1. Show that  $\sum_{i=1}^{n} (i+1)2^{i} = n2^{n+1}$  for all positive integers n.

- 2. Let n be a positive integer and  $A_1, \ldots, A_n$  be some sets. Let us define union of these sets as follows:

  - 1.  $\bigcup_{i=1}^{1} A_i = A_1$ , 2.  $\bigcup_{i=1}^{k+1} A_i = (\bigcup_{i=1}^{k} A_i) \cup A_{k+1}$ .

Show that  $\bigcup_{i=1}^{n} [i] = [n]$ .

3. (10 points) Let  $\Omega$  be some set. Consider  $A_1, \ldots, A_n \subseteq \Omega$ . Show that  $\bigcup_{i=1}^n A_i = \{x \in \Omega : \exists i \in [n] \ x \in A_i\}$ .
